```swift
//compares two strings character by character by sorting them
func checkForAnagram(firstStr: String, secondStr: String) -> Bool {
    print(firstStr.sorted())
    print(secondStr.sorted())
    return firstStr.lowercased().sorted() == secondStr.lowercased().sorted()
}
let a = checkForAnagram(firstStr: "race", secondStr: "care")
```
