```swift
//concatination
let string1 = "hello"
let string2 = " world"
let myString = string1 + string2
print(myString)

    //interpolation
let name = "john"
let age = 19
print("his name is \(name) and his age is \(age)")

let name = "shriyadita"
var password = "12345678"
print("your name is \(name)")
if password.count < 8
{
    print("password is invalid")

}
else
{
    print("password entered successfully")
}
```
